

The OphthAVet® Family

A solution for all of your artificial tear needs

KEY FEATURE #1:

High Molecular Weight Hyaluronan

ITS BENEFIT:

Remains on ocular surface longer than low molecular weight hyaluronan and improves lubrication and tear film stability. This promotes corneal healing by helping to prevent corneal dehydration.

KEY FEATURE #2:

Medical Grade Hyaluronan

ITS BENEFIT:

Has fewer contaminants than cosmetic grade and it has undergone additional purification steps

KEY FEATURE #3:

Contains Osmoprotectants

ITS BENEFIT:

Helps corneal cells survive osmotic stress and may help reduce cell inflammation and death.

KEY FEATURE #4:

Viscoadaptive – not your typical artificial tear

ITS BENEFIT:

It's blink-activated – helps the tear film adapt to corneal surface changes. It mimics healthy tear film performance and stabilizes tear film as it provides long-lasting comfort, hydration, and relief. OphthAVet often requires only 1 to 2 applications per day for relief.

KEY FEATURE #5:

Gel and Solution are preservative-free

ITS BENEFIT:

Some preservatives disrupt the corneal surface integrity.

Why Viscoadaptive Properties Matter

When eyes are open (at rest), OphtHAVet's high viscosity helps reduce tear drainage and tear film break-up.

As the animal blinks, the viscosity is reduced because of the pressure of the eyelid closing. This prevents damage to the eye surfaces.

When the eye reopens, OphtHAVet's viscoadaptive properties provide elasticity, allowing the solution to return to high viscosity.

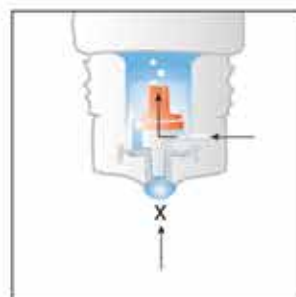

Unique Delivery System

Squeeze and Release

Valve Opens, Product Dispenses

Valve Closes with No Backflow
(Helps Prevent Contamination)

CHECK-OFF &
ECHO NOTES

Start an Effective Team to Pet Owner Conversation

If engaging in an initial discussion, state the issue:

Ms. Johnson, our exam revealed that Charlie has dry eyes.

Or, for a follow up visit, Ms. Jones, my exam revealed a need to modify Charlie's treatment plan for managing dry eyes.

State the solution

The OphtHAVet Family of products provides a solution for artificial tears and is a lubricant to help prevent further eye irritation. OphtHAVet often requires only 1 to 2 applications per day for relief.

Make your recommendation

Ms. Johnson, we believe OphtHAVet will relieve dryness in Charlie's eyes. Do you have any questions?
